Vubiq Networks Wins Best Solution Award at SMB TechFest

HaulPass V60 Wireless Solution Extends the Reach of Gigabit Ethernet

IRVINE, CA, August 3, 2015 – [Vubiq Networks, Inc.](#) today announced that its [HaulPass V60™](#) Gigabit Ethernet wireless connectivity system was voted “Best Solution” by the attendees at the recent [SMB TechFest](#), California’s largest quarterly technology conference. HaulPass V60 is an advanced [60 GHz millimeter wave](#) broadband wireless data connectivity solution that delivers low-latency, full-duplex Gigabit Ethernet transport speeds in a small, ruggedized, easy-to-install enclosure.

“We are honored to have received the prestigious Best Solution award at SMB TechFest,” said [Mike Pettus](#), founder and CTO of Vubiq Networks. “This quarterly conference provides an excellent venue to learn about the latest developments in IT technology. With so many outstanding products and solutions showcased at TechFest, it is an honor to have been selected as the best solution.”

[Dave Seibert](#), SMB TechFest co-founder and CIO of IT Innovators, stated, “Our attendees were very impressed with the HaulPass V60 wireless technology. The product provides an easy, cost-effective way for companies, network operators, solution providers, and mobile carriers to extend their high-speed networks in situations that would otherwise be impossible or cost prohibitive.”

Taking advantage of the license-free 60 GHz millimeter wave radio band, the HaulPass V60 supports Gigabit Ethernet wireless connections to line-of-sight destinations. Unlike other half-duplex wireless solutions, the V60 is a full-duplex solution offering two gigabit aggregate throughput, thereby providing a significantly higher return on investment. The system features an integrated two-port Gigabit Ethernet switch for multiple connections that can be used for campus networks or to daisy chain multiple HaulPass V60 systems for extended distances.

“We’re very excited to be shipping an enhanced version of our HaulPass V60 wireless solution in volume to our customers who are saving thousands of dollars in trenching and fiber installation costs”, said [Ed Snyder](#), CEO of Vubiq Networks, “Receiving this important award voted on by the attendees at SMB TechFest is a validation of our advanced technology by our peers, for which we are truly honored.”

About SMB TechFest

As California’s largest quarterly technology conference, SMB TechFest provides solution providers, MSPs, VARs, cloud partners, IT pros, and more with industry expert speakers and content. The mission of SMB TechFest is to teach and educate IT pros and partners on current and upcoming industry technologies. For more information, visit www.smbTechFest.com.

About Vubiq Networks

[Vubiq Networks, Inc.](#) is a privately held wireless networking technology company headquartered in Irvine, California. The company’s focus is on high-bandwidth, 60 GHz wireless link transmission products that enable gigabit speed transport for broadband wireless fiber extensions, wireless metropolitan area networks, and mobile backhaul applications. For more information, visit www.vubiqnetworks.com.
